Hello Hub V1

The little black box that started it all.
Quad Core ARM.

Status Lights

The face of the Hello Hub (V1) houses 3 status lights.

From left to right when facing the ring-u logo:
(sp)(sp)The **1st Light** turns **red** to indicate power is on.
(sp)(sp)The **2nd Light** blinks **yellow** to indicate network communication.
(sp)(sp)The **3rd Light** is the main status light.
(sp)(sp)(sp)It blinks **blue** when making attempts to contact the ring-u servers,
(sp)(sp)(sp)is solid **green** when it has a successful connection with ring-u,
(sp)(sp)(sp)and occasionally blinks **purple** to indicate that the battery monitoring service is working.

The **3rd Light** can *also* indicate system errors.
(sp)(sp)**Alternating Red and Yellow** indicates that the Hello Hub has encountered an internal software error and needs to be powered off and on again.
An **occasional red flash** indicates that the Hello Hub failed to retrieve an update from the ring-u servers. It will try again automatically.
(sp)(sp)**Solid Red** indicates the Hello Hub can not get past the firewall. A firewall reboot usually clears this error.
